Asset Value:

**R 4,055,000**

Stock Value:

**R 154,000**

Yearly Net Profit :

**R 9,297,994**

# Business Report

## Fully describe the business's activities?

The buyer of this business will be familiar with the business activities of such a business

## How does the business operate on a daily basis?

The business operates as a scrap metal collection, processing, and resale operation. Daily activities typically include:

- Receiving scrap from walk-in suppliers and contracted collectors
- Weighing and grading materials (ferrous vs non-ferrous)
- Sorting, cutting, and preparing scrap for resale
- Loading and dispatching bulk quantities to larger processors/exporters
- Managing cash purchases and supplier payments

Operations are highly dependent on:

- Working capital (for buying scrap)
- Equipment (e.g., scales, cutting equipment, trucks)
- Staff efficiency in sorting and handling material

## What Advertising/Marketing is carried out?

Formal marketing is usually limited. The business likely relies on:

- Word-of-mouth referrals
- Existing supplier networks
- Local visibility and signage

Digital or structured marketing is generally minimal in this sector, which can represent an upside opportunity.

## What competition exists?

Competition typically includes:

- Other licensed scrap dealers in the region
- Informal/unregistered operators
- Large national scrap groups with greater buying power

Competitive factors:

- Pricing offered to suppliers
- Payment speed (cash flow strength)
- Location and accessibility
- Relationship networks

## Give a breakdown of staff/ functions/ length of service?

To be obtained during due diligence

## Do any have management potential?

No

## How involved is the Owner in running the business?

The owners runs the daily operations of the business as well as the finances.  
This is a family run business.  
During the valuation process provision for manager salary of R60 000 per month were provided.

## When does the current lease end?

The owners own the premises. The premises is not for sale but the buyers will rent it.  
One of the competitive advantages of the business is that it have a weighbridge on the premises.  
The only scrap dealers in the area with a weighbridge. The premises is perfectly allocated and important aspect to the business success.

## What are the trading hours?

Monday to Thursday 7H30 to 7H00  
Friday 7H00 to 16H00  
Saturday Closed

## What are the main assets of the business?

A full list of assets will be provided

## Strengths?

The business demonstrates a number of entrenched competitive advantages that position it as a dominant and highly defensible player within its regional market:

Long-standing operating history and reputation

Established in 1971, the business has built over five decades of trust, credibility, and recognition, which underpins both supplier loyalty and customer confidence.

Market leadership and scale

As the largest scrap metal dealer in the area, the business benefits from superior scale in purchasing, processing, and negotiating resale pricing, giving it a clear advantage over smaller operators.

Control over supply through strategic supplier relationships

Four of the region's largest scrapyards channel their scrap into the business. This effectively positions the business as a central aggregator, ensuring consistent high volumes and stronger pricing leverage in downstream sales.

Secured and recurring supply via bin network (critical advantage)

The company owns 64 bins deployed at customer premises, which are used both for scrap collection and rental purposes.

This creates a predictable, recurring inflow of scrap material

It effectively locks in supplier relationships and reduces reliance on opportunistic buying

It establishes a built-in customer base with ongoing engagement

This system is a significant competitive differentiator, as competitors without similar infrastructure are forced to compete for supply on a transactional basis.

Integrated logistics capability

The business owns two trucks dedicated to transporting bins, ensuring:

Reliable and timely collection cycles

Lower dependence on third-party logistics

Greater control over supply chain efficiency

Additional revenue stream and operational flexibility (crane truck)

The company owns a 30-ton crane truck which:

Is rented out to perform external work

Supports demolition projects, creating access to additional scrap supply channels

Generates supplementary revenue independent of core scrap trading

This adds both diversification and strategic sourcing capability, as demolition work often leads directly to scrap acquisition.

Superior infrastructure and storage capacity

The yard allows for large-scale stock accumulation and pre-loading, enabling the business to:

Consolidate volumes

Time the market for better pricing

Operate more efficiently than competitors with limited space

Value-added processing capability

Equipment such as the gantry shear (guillotine shear) enhances scrap quality and pricing, while the press and other machinery improve handling efficiency and throughput.

Operational efficiency and cost advantage

Tools such as the scrap grab reduce labour requirements, improve safety, and increase processing speed—contributing to a lower cost per ton handled.

Strong barriers to entry

The business's scale, infrastructure, logistics assets, and embedded supplier network create significant capital and relationship barriers, making it difficult for new entrants or smaller competitors to compete effectively.

## Weaknesses?

Working capital requirements

The need to purchase scrap (often cash-based) requires disciplined cash flow management.

## Opportunities?

Expansion of bin deployment network

Increasing the number of bins at customer sites could further entrench supply control and expand market share.

Increased utilization of existing infrastructure

The current yard, plant, and logistics capacity provide room to grow throughput without proportional increases in fixed costs.

## Threats?

Commodity price volatility

Fluctuations in scrap prices can impact margins and supplier motivation. This can be good or bad for the business. Because of the storage capacity the company can hold on to stock till prices improve and the sell.

Regulatory environment

Increasing regulation around scrap trading and compliance may increase operational complexity.

## What is the reason for the sale?

The owners want to retire
